

Daniel Mehler

AI & Full-Stack Software Developer

📍 Barcelona, Spain | ✉ daniel.sebastian.mehler@gmail.com | 🔗 linkedin.com/in/daniel-mehler

AI and full-stack software developer combining a mathematically grounded BSc in Cognitive Science (Tübingen) with an applied Master in AI for Business (EADA, Barcelona). **Shipped** production AI systems as co-founder of an EdTech venture and as a developer for healthcare and fintech clients; **trained** and fine-tuned deep-learning models (CNNs, LLMs) in PyTorch and **deployed** cloud infrastructure on AWS.

Education

Master in AI for Business *EADA Business School, Barcelona* Oct 2025 – Jul 2026

- **Specialising** in machine learning applications, AI strategy, and product development, with applied industry projects including an AML classification model for the digital bank MyInvestor and a clinical computer-vision datathon (see Projects).

Bachelor of Science, Cognitive Science *Eberhard Karls Universität Tübingen* Oct 2021 – Oct 2024

- **Concentrated** on the formal core of the degree: linear algebra, multidimensional analysis, statistics, algorithms, machine learning, and computational linguistics (NLP), alongside programming in Python and MATLAB.

Professional Experience

Co-Founder & Full-Stack Developer *Voralio – EdTech Venture (voralio.com)* Feb 2026 – Present

📍 Barcelona, Spain

- **Co-founded** Voralio, an AI-powered oral-assessment platform that modernises oral exams in higher education through real-time AI voice interviews; pitched to the business-school dean and faculty, with a pilot currently in progress.
- **Designed and built** the production web app end to end: teacher exam hub, account-free student exam flow, Firebase-backed APIs, Vapi voice integration, and OpenAI-powered PDF summarisation that generates transcripts and structured evaluations for instructors.
- Stack: Next.js, TypeScript, React, Firebase, Vapi, OpenAI, Tailwind CSS, Vercel.

Software Developer *Dlife – Diabetes-Care Platform (dlife.mx)* Jan 2026 – Present

- **Delivering** a three-sided healthcare platform (patients, doctors, pharma) for Dlife, a Mexican diabetes-treatment provider, as one of three developers: role-specific registration flows, dashboards, and permissions; software sold and partially paid, delivery expected Aug 2026.
- **Designed and deployed** the platform's cloud infrastructure on AWS, including secure role-based authentication, an automated CI/CD pipeline, and an integration with an external affiliate programme.

Full-Stack Developer *Axo Capital – FinTech* Apr 2026 – Present

- **Co-developing** a lending platform for Axo Capital, a Mexican non-bank financial institution that finances importers and exporters against outstanding invoices to bridge their order-to-payment gap.
- **Building** automated creditworthiness analysis that scrapes invoice data from Mexico's tax authority (SAT) to assess borrower cash flow, financial health, and transaction validity before findings reach human credit analysts.
- Stack: Ruby on Rails (backend), React (frontend).

AI Software Developer *Medphoton, a Brainlab Company* Feb 2025 – May 2025

📍 Salzburg, Austria

- **Designed and implemented** a Python-based voice-command system for CT scanners as sole developer, integrating classical speech recognition with LLMs and prompt engineering, and delivered a working prototype within a 3-month timeline.
- **Architected** the end-to-end pipeline (input processing, LLM inference, command mapping) and evaluated multiple model configurations for accuracy and latency trade-offs in a safety-critical medical context.
- **Produced** a 50-page technical report documenting methodology, benchmark results, and deployment considerations, enabling the team to make informed next-step decisions.

Projects

Money-Mule Detection Model – MyInvestor *University Project – EADA Business School* Feb 2026 – Present

- **Developing** an interpretable binary-classification model to flag money-mule accounts for MyInvestor, a Spanish digital investment platform, as part of an anti-money-laundering (AML) workflow that outputs risk scores for compliance-team review rather than automated decisions.
- **Built and evaluated** explainable models (Logistic Regression, Decision Trees, Gradient Boosting with SHAP) on 3,000 accounts using device, transactional, and KYC features, prioritising interpretability and auditability.
- **Designed** a conceptual framework for a dynamic model addressing temporal feature drift, covering concept-drift detection, rolling retraining windows, and behavioural sequence modelling.

Cardiomegaly Detection from Chest X-Rays – Datathon *University Project – EADA Business School* Apr 2026

- **Built** an end-to-end computer-vision system to detect cardiomegaly from chest X-rays in 5 days, running the full PyTorch pipeline: preprocessing, augmentation, training, validation, and evaluation.
- **Developed** a web app for doctors to upload X-rays and receive predictions with clinical-support features, prioritising real-world usability: workflow integration and edge-case handling beyond a traditional demo.

InstaDash – AI-Powered Dashboard Generator *Personal Project* Jan 2026

- **Building** a full-stack web application that transforms uploaded CSV files into interactive dashboards instantly, eliminating manual chart setup for non-technical users.
- **Integrated** a conversational AI chatbot that interprets natural-language requests to modify dashboard layout, chart types, and filters in real time.

NutriPilot – Full-Stack Progressive Web App *Personal Project* May 2025 – Sep 2025

- **Built** a nutrition and meal-planning PWA from scratch in pure HTML, CSS, and JavaScript (no frameworks), owning the full lifecycle from Figma UX design through frontend, backend, and deployment.
- **Implemented** offline support and installability via Service Worker APIs, achieving full PWA compliance.

ML-Based Disease Diagnosis System *University Project – Universität Tübingen* Apr 2023 – Aug 2023

- **Developed** a MATLAB diagnostic tool processing geographic and meteorological datasets to estimate regional disease likelihood, integrating several machine-learning algorithms for prediction and analysis.

Speech Command Recognition System *University Project* Dec 2022 – Feb 2023

- **Developed** a two-stage speech-recognition system (keyword + command detection) using CNNs, processing audio into Mel-spectrograms and training on the Speech Commands dataset.
- **Achieved** 95% classification accuracy across 34 spoken commands; implemented and optimised models in PyTorch with regularisation and performance evaluation.

Skills

AI / ML	ML/DL models (SVMs, CNNs, Gradient Boosting, Transformers/LLMs), AI Agents, RAG, MLOps
Languages	Python, R, JavaScript, TypeScript, SQL, Java, MATLAB, Ruby, HTML5, CSS3
ML / Data stack	PyTorch, Scikit-learn, Pandas, MLflow, Flask, Pytest
Web	Next.js, React, Ruby on Rails, Firebase, Tailwind CSS
Cloud / Dev tools	AWS (EC2, Cognito, RDS, Lambda, Amplify, S3), Vercel, Git, REST APIs, Figma
Spoken	German (native), English (C1), Spanish (B1)
